8. (currently amended) The method of claim 79, further comprising the step of positioning said workpiece based on said converted vertical distance.

9. (currently amended) A method for adjusting the vertical position of a workpiece, said method comprising the steps of:

transmitting a light beam onto the top surface of said
workpiece at a predetermined angle relative to a normal axis
associated with said workpiece;

detecting the light beam projected on the top surface of said
workpiece;

detecting a lateral shift of said detected light beam on the
top surface of said workpiece, said shift occurring as a result of
a vertical translation of said top surface; and,

converting said detected lateral shift to a corresponding
vertical distance using trigonometry~~The method of claim 7, wherein~~
the step of detecting said detected light beam ~~further~~ comprises
the steps of:

monitoring a boundary of said detected light beam;

generating signals representing positions of said boundary;

and,

evaluating said signals for determining a center point of said
boundary.
